Continuation Sheet (PTOL-303) 09/593,645

Application No.

Continuation of 2. NOTE: Applicant has now added the limitation of a fold line "which extends across said separate image layer". The limitation raises the issue of the fold line location which requires further search and consideration. Furthermore, applicant's argument that Applebaum et al does not disclose that the first and second susbstrates are integral, is not persuasive. Although the examiner relied on obvious design choice rationale to make the image product integral, after further review of Applebaum et al, it is deemed that the first and second susbstrates are indeed integraly formed via hinge element (48). Applicant does not limit the claim to "a continuous, non-interrupted support substrate having an image thereon with at least on fold line extending across said image to such that the support substrate can be folded." The term "integral" is given its broadest, reasonable meaning, i.e., that the elements are connected together. Use of such term does not restrict the use of another element which aids in the integral connection.
